

TO KEEP YOUR FREEDOM, PAY AND CHARGE IN CASH

One of the objectives of the World Economic Forum (WEF) is to eliminate cash and implement the Central Bank Digital Currency (CBDC). The elimination of physical money is equal to losing our freedom. That's why we have to avoid it.

The WEF announced a long time ago that it wants the whole world to be like China. If the only means of payment were digital, the WEF would have an easier time installing the social credit system used in that country, linked to a maximum monthly carbon footprint rate and a facial recognition system. Those who obey everything the state says, including mandatory vaccination for life, have access to their money. Otherwise they put restrictions on you. Examples:

- If you do not inoculate the last dose, your bank account is not authorized to pay in a cafeteria or restaurant, nor to buy tickets for the theater, cinema or a concert, nor to travel by public transport. That is, if you do not get vaccinated, you cannot access crowded places with the excuse that "you can infect others".
- If you exceed the monthly carbon footprint limit, until the next month your account will not be able to buy flight tickets, meat, or gasoline.
- If the facial recognition cameras catch you frequently hanging out with people with low scores in the social credit system, you will also have restrictions on how you can use your money.

The WEF says that said digital currency will be programmable, that is, they can program it so that your income expires after a certain time, or so that you cannot save more than a certain amount. We are talking about total control of your life.

They want to know what we do, where we go, who we hang out with, what we eat, what we buy, where we travel... All to have more power over you and take away your freedoms. They want the whole world to be like China. Do not let that happen!

How do we keep physical money in circulation? There are many ways, but the first is by using it. They have control of how much money moves digitally around the world. If they detect that digital transactions are going down, they will know that people are paying more in cash because they want to continue using it. And they will not be able to eliminate the banknotes because they know that when the people say "NO", it is "NO". There are plenty of examples throughout history in which a determined and united people achieve their will. **For cash to continue to exist and you to continue to be free, pay and charge as much as you can in cash.**
