Science

Another Ice Age?

Monday, Jun 24, 1974

Telltale signs are everywhere—from the unexpected persistence and thickness of pack ice in the waters around Iceland to the southward migration of a warmth-loving creature like the armadillo from the Midwest. Since the 1940s the mean global temperature has dropped about 2.7° F. Although that figure is at best an estimate, it is supported by other convincing data. When Climatologist George J. Kukla of Columbia University's Lamont-Doherty

1978: 'No End in Sight' to 30-Year Cooling Trend

International Team of Scientists Finds No End in Sight to 30-Year Cooling Trend in Northern Hemisphere

Source: *New York Times*, January 5,
1978

THE GUARDIAN Tuesday January 29 1974

Space satellites show new Ice Age coming fast

The New York Times Book Review / July 18, 1976

The Cooling

So writes Stephen Schneider, a young climatologist at the National Center for Atmospheric Research in Boulder, Colo., reflecting the consensus of the climatological community

Then the Global Warming Prediction

Just 10 years later - June 23rd, 1988, Dr. James Hansen of NASA kicked off global warming in a warning to congress.

& He predicted Ice-Free Arctic – New York Underwater

Hansen, echoing work by other scientists, said that in five to 10 years, the Arctic will be free of sea ice in the summer.

The Argus-Press • Owosso, Michigan • Tues., June 24, 2008

By **SETH BORENSTEIN**
AP Science Writer

what you're saying about the greenhouse effect is true, is anything going to look different down there in 20 years?" He looked for a while and was quiet and didn't say anything for a couple seconds. Then he said, "Well, there will be more traffic." I, of course, didn't think he heard the question right. Then he explained, "The West Side Highway [which runs along the Hudson River] will be under water. And there will be tape across the windows across the street

Wrong on both accounts – All three?

What is this really about?

UN Saw Their Chance for Power

"We (UN-IPCC) redistribute de facto the world's wealth by climate policy..."
"One has to free oneself from the illusion that international climate policy is environmental policy. This has almost nothing to do with environmental policy anymore..."

Dr. Ottmar Edenhofer, IPCC co-chair of Working Group 3, November 13, 2010 interview (with Dr. Charles Bettig)

There are many other quotes from UN officials and politicians saying similar things. They gain power and money from it.

This is really about control of regular people. Limiting energy and food supplies hurts us all – except the elites

The History of Climate

The earth has always naturally warmed and cooled

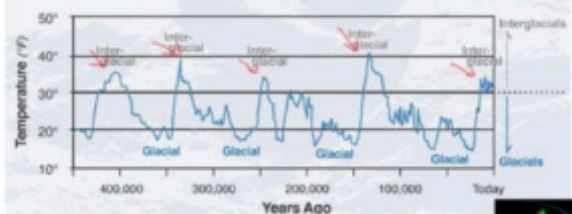

The last 500,000-years there have been 100,000-120,000-year glacial periods 10,000-20,000-year warmer times

It was several degrees warmer 5000 to 8000 years ago. The age of milk & honey, people and animals like warmth.

Interglacials of the Past were Far Warmer than the last 12,000 years

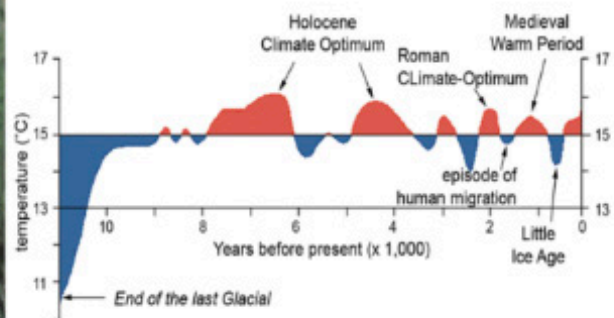

- Source for graph: Utah Geological Survey (red arrows my addition)
- <https://geology.utah.gov/map-pub/survey-notes/glad-you-asked-ice-ages-what-are-they-and-what-causes-them/>

Glacial-interglacial cycles over the past 450,000 years

The Last 12,000 Years Present on the Right

Northern Hemispheric temperature reconstruction for the past 10,000+ years

Red is warmer and blue is colder temperature. Warmer times are better for plants, animals, and people. The fall of the Roman Empire matched the end of the Roman Climate Optimum, about 400AD.

A 5,000 year old tree stump From a warmer time Near the arctic circle

PLATE IV Tree stump (*Picea glauca*) in the north Canadian tundra.
The stump, radiocarbon dated about 4940 years (± 140) B.P., is seen still standing on a steep bank on the Tuktoyaktuk Peninsula ($69^{\circ}7'N$ $133^{\circ}16'W$) which borders the Arctic Ocean (Beaufort Sea) east of the delta of the Mackenzie River in extreme northwest Canada. This tree in what is now tundra shows wider growth rings than the nearest present-day spruce forest 80-100 km farther south, near Inuvik in the lowest part of the Mackenzie River valley.
(Photograph kindly supplied by Professor J. C. RITCHIE of Scarborough College, Toronto University, and reproduced with his kind permission.)

There is compelling evidence that it was warmer in the PAST

During the Medieval Warm Period (950-1350)
Vikings grew barley in Greenland

During the Roman Climate Optimum (200BC-400)
Romans grew wine grapes in England

Now it is not warm enough to do either

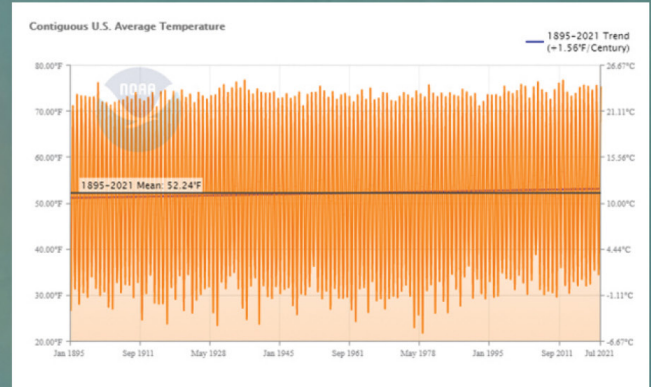

Peer reviewed studies - it was warmer in most of the world during these times

We have found forests under receding glaciers

It was warmer when they grew thousands of years ago

The world has been warming naturally since 1850 out of the Little Ice Age (1350-1850)

According to the National Oceanic & Atmospheric Administration (NOAA) US is up about 1.6°F in the last 100 years

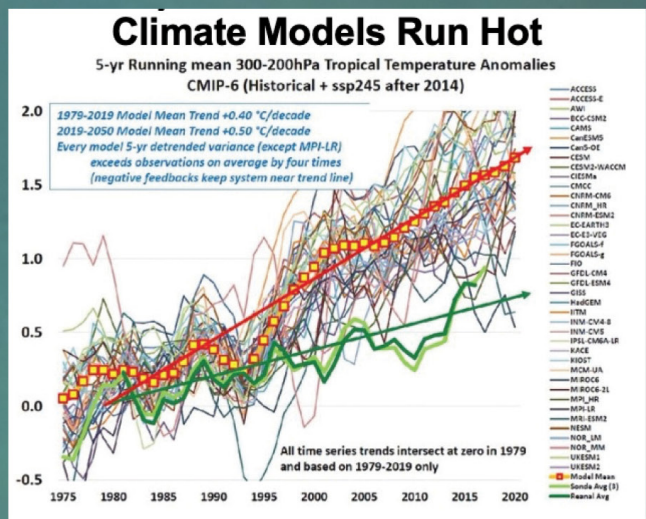

Average monthly temperature of the US. Top of the graph are the warmer summer months and bottom are the lows of winter

Most of the rest of the world has warmed about the same amount.

Weather is very local. Temperature and rainfall can be vastly different just a few miles away.

Climate Models Run Hot

(UN Climate models are highly inaccurate)

Climate

The climate system is a coupled non-linear chaotic system, and therefore the long-term prediction of future climate states is not possible (UN IPCC)
<https://archive.ipcc.ch/ipccreports/tar/wg1/501.htm>

Experts Say

“Water vapor and clouds make up 95% of the Greenhouse effect. There is no climate crisis.”

Dr. Will Happer, Emeritus Professor of Physics Princeton

“There is no climate emergency. Americans should not be stampeded into a disastrous climate crusade.”
Dr. Richard Lindzen, Emeritus Professor of Atmospheric Sciences, MIT

“Warming never was and never will be a serious problem. Tenfold variations in CO₂ over the past half-billion years have no correlation whatsoever with temperature.”
Dr. Nir Shaviv, Astrophysicist, Hebrew University of Jerusalem

“There is no significant man-made global warming at this time, there has been none in the past and there is no reason to fear any in the future”
John Coleman, Meteorologist, Co-founder of the Weather Chanel

“I am firmly of the belief that the future will show that this whole hysteria over climate change was a complete fabrication.”
Dr. Patrick Moore, Ph.D. in Ecology, Co-founder and former president (9 years) of Green Peace

No Consensus

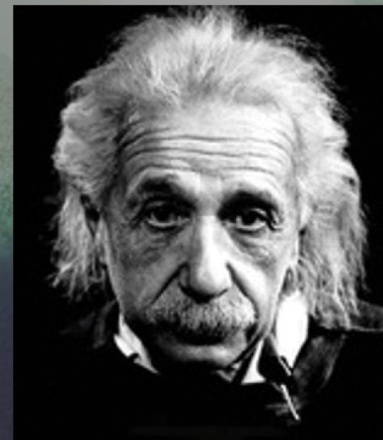

The 97% consensus was a statement made by President Obama and Sen. Bernie Sanders to justify making our electricity and energy more expensive.

It comes from a discredited study by John Cook, a research assistant professor at the Center for Climate Change Communication at George Mason University and he runs a manmade climate change blog.
https://www.econlib.org/archives/2014/02/david_friedman_14.html#318949

The “consensus” is used by those who want to use manmade climate change to limit our energy and now our food supply. The Netherlands and Canada are limiting the use of nitrogen fertilizers in the name of climate change that will dramatically lower food crop harvests and put farmers out of business.

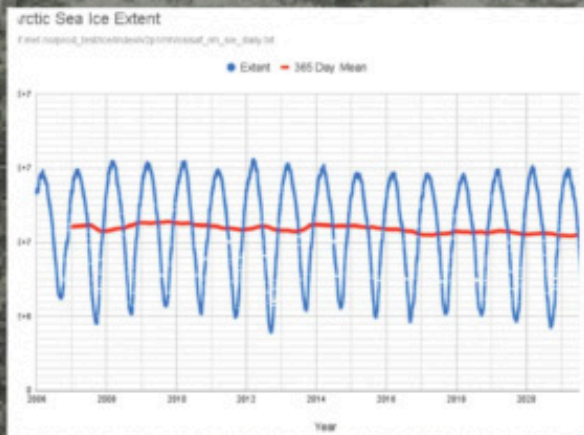

Consensus is Utterly Irrelevant to Science

“Why 100? If I were wrong, one would have been enough.” In response to the book - Hundred Authors Against Einstein – Written to discredit his theory of relativity because he was a Jew

50 Years of Failed Climate Predictions

Al Gore told us the "experts" predicted an ice free Arctic by 2013 – Wrong

"Experts" told us that sea island nations will go underwater from rising sea levels - 76% of the islands are growing

"Experts" told us that food would become short – worldwide crop harvests are up by 33% in the last four decades

1989 UN "expert" report said nations would be "wiped off the face of the earth" by 2000 – they have not

They took the "glaciers gone by 2020" signs down at the Glacier National Park – Because the glaciers are still there

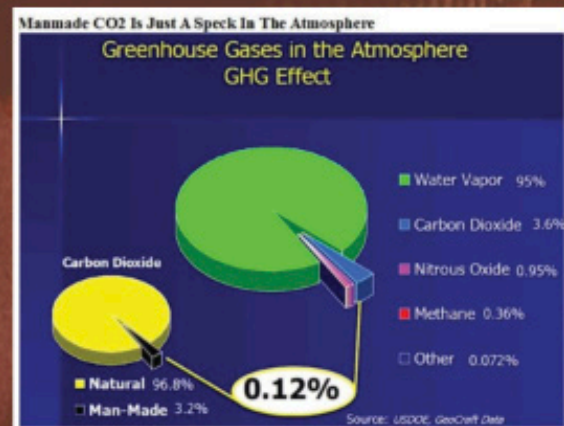

"Experts" claimed Polar Bears would decline more now

More droughts and major floods – Neither

More hurricanes – Less not more

Greenhouse Gases (GHG)

Water vapor (WV) is the most abundant, important, impactful GHG (NASA)

WV is about 20,000 parts per million (ppm) & CO2 is 420 ppm
Methane is less than 2 ppm
They all do the same thing – absorb and reemit energy

Water Vapor is 50 times more abundant than CO2 in the air

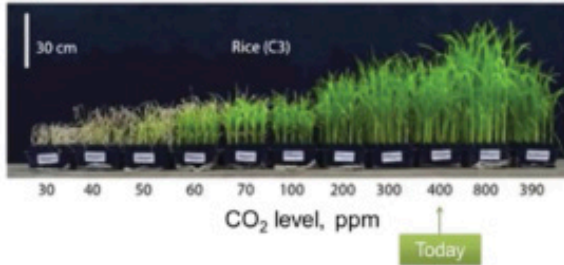

It is like adding 11 drops alcohol (CO2) to an ounce (560 drops) of alcohol (WV), having a couple and blaming how you feel all on the 11 drops.

Or, adding 2 ounces to a gallon of gas, then saying all the distance you travel is from the extra 2 ounces.

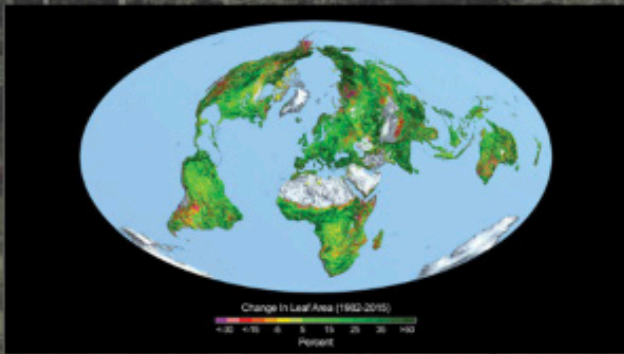

Carbon Dioxide - CO₂

CO₂ Effect on Photosynthesis

Clear risk of low CO₂ and benefit for high CO₂

CO₂ is plant food. Greenhouses add it to make plants grow bigger, faster with less water. It will take 200 years to double CO₂ to 800 ppm. In the distant past it has been as high as 7,000 ppm.

<https://www.nasa.gov/feature/goddard/2016/carbon-dioxide-fertilization-greening-earth>

The world is 30% greener because of increasing CO₂. Darker = more greening

We exhale about 2 pounds of CO₂ a day

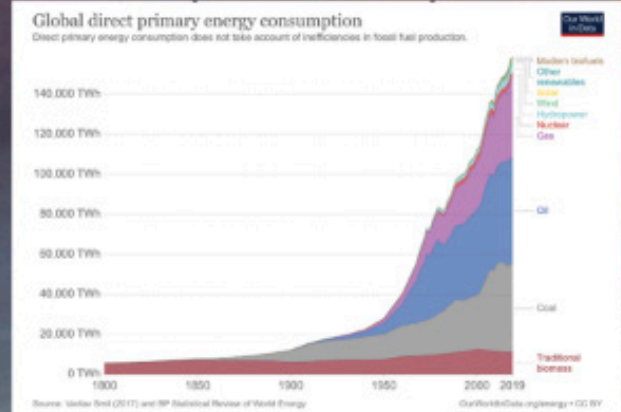

CO₂ is the fizz in coke, beer and ...

Schools and offices have double the CO₂ than the outside air

Earth releases and recycles 20 times more CO₂ than man releases

Oceans recycle the most – plankton also supplies the most oxygen to the air

Coal Oil & Natural Gas (NG) (Fossil Fuels)

Coal, oil & natural gas provide the world with 84% of our energy

More energy = longer lives, better lives, climate-controlled buildings, better environment, life saving medical equipment and services

Oil is made into 6,000 products, including life saving medical equipment & plastics

NG makes fertilizers that make our food grow better and many other things we use every day

Wind & Solar are just 4% after \$5 trillion in spending, they produce little or no energy 70% of the time

China uses half of the 8 billion tons of coal used each year

Without fossil fuels people will starve, and our world comes to a stop – no cars, planes, electricity, internet, or cell phones

Climate Trend

- Climate related deaths down 99% in last 100 yrs (Human progress)
- No trend in tropical cyclone counts since 1970, globally. (Maue, updated 2022)
- No trend in drought since 1950, globally (NASA)
- No trend in river floods (IPCC AR6)
- U.S. EF4/5 (most powerful) tornadoes down 50% in U.S. since 1950 (U.S. Tornadoes)
- Sea levels – barely rising an inch a decade since 1880 (Tidal records & NASA)
- Arctic sea ice down about 15% - upward trend recently (National Snow & Ice Data Center)
- Antarctica has not warmed in 70 years – coldest recorded winter last year (Peer reviewed study)
- Forest fires trending down (NASA)– fuel management is key
- Polar bear population up from 7,000 to about 30,000 (Professor Susan Crockford - Polar Bear Expert)

Climate Change

I imagine your family and their future is as important to you as mine is to me. That is why I am compelled to tell you the truth, as unpopular as that may be. It is of the utmost importance.

Open this brochure and learn some of the propaganda surrounding the false predictions of climate change. There is no peer-reviewed study that proves that CO2 is the control knob of the climate or that man is the cause.

While the West is being led on a downward path of less energy & energy dependence, the rest of the world is building hundreds of coal plants & embracing energy independence. Because coal is reliable, abundant, safe & low-cost energy.

The trace gas CO2 is a minor greenhouse gas compared to the dominant greenhouse gas, water vapor (WV) (NASA). WV is 50 TIMES more abundant than CO2. They both do the same thing, reemit energy in the air.

Both Mars and Venus have atmospheres, that are more than 95% CO2. Mars is cold and Venus is hot. The Earth has been both warmer and colder with higher and lower CO2 in the past, as Israeli Astrophysicist Nir Shaviv points out.

We need to face the reality that no matter what we do, even if you do not believe the above, will not stop the earth from warming or cooling. The earth has always warmed and cooled to its own unpredictable schedule. Even the UN IPCC admits this.
