'Climate Change' Is Doubtful. 'Green Energy' Brings More Climate Change

Dr. Bo (Larry) Lan
Assistant Professor
of Supply Chain Management at WVU

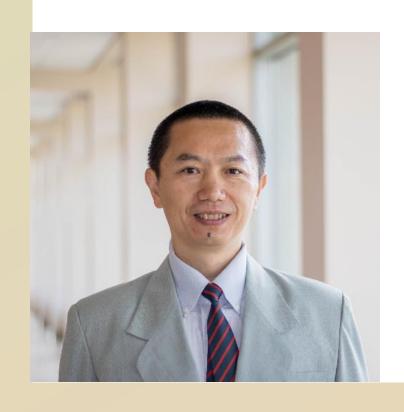

04/29/2024

Introduction

Dr. Bo (Larry) Lan

- Bachelor of Science (Applied Physics)
- Bachelor of Economics
- PhD. of Supply Chain Management
- Assistant Professor of Supply Chain
 Management at West Virginia University

Introduction

Two stories to explain my scientific ideas

https://humanskillsdevelopment.ca/product/critical-thinking/

Why did dinosaurs go extinct?

Multiple hypotheses exist

- Asteroid impact event
- Intense volcanic activity
- Sea-level falls
- climate change

https://en.wikipedia.org/wiki/Cretaceous%E2%80%93Paleogene_extinction_event https://en.wikipedia.org/wiki/Dinosaur

ttps://www.smithsonianmag.com/science-nature/the-top-ten-weirdest-dinosaur-extinction-ideas-23642539/#:~:text=Today%2C%20paleontologists%20have%20discerned%20that,extinctions%20in%20our%20planet's%20

- Asteroid impact is just **One** of the hypotheses...
- Keep an open mind to learn other hypotheses

to promote the development of science.

Another similar story:

- The Sun, planets, stars are rotating around the Earth everyday?
- It's just **one** of the hypotheses.

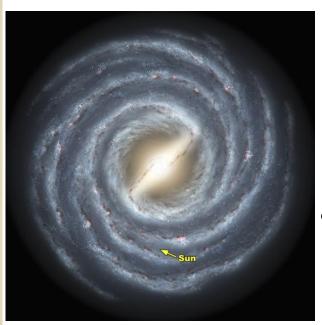

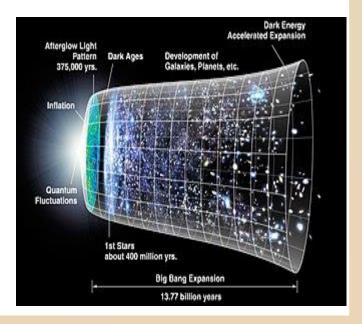

Another similar story:

Then we have more other hypotheses,
e.g. Nicolas Copernicus
Heliocentric System hypothesis.

Further hypotheses:

- e.g., solar system
 rotating around the
 center of Milky Way
 Galaxy
- And the Big Bang hypothesis.

 Keep an open mind to learn other hypotheses.

 Make smart decisions by using critical thinking rather than only focus on one not-comprehensively proved hypothesis.

There are some scientists doubt the hypothesis of 'climate change'. There are other hypotheses. Here are a few of them:

1. **Nobel Prize winner** in physics Dr. John F. Clauser said 'There is no climate crisis.'

https://www.washingtonpost.com/climate-environment/2023/11/16/john-clauser-nobel-climate-denial/

2. Why Scientists Disagree About Global Warming?

https://climatechangereconsidered.org/why-scientists-disagree-about-global-warming

3. 'New study suggests global warming could be mostly an urban problem' 2023- led by a Harvard professor- global temperature measuring might be biased by urbanization.

https://www.ceres-science.com/post/new-study-suggests-global-warming-could-be-mostly-an-urban-problem

4. 'A Preliminary Study on the Climatic Change during the Last 5000 Years in China,' 1972 by a Chinese meteorologist Kezhen Zhu (Co-Ching Chu, 1890–1974).

- How about 97% scientists' consensus?
- It has been challenged for years. For example,

Fact Checking The Claim Of 97% Consensus
 On Anthropogenic Climate Change

2. 97% Consensus on Climate Change? Survey Shows Only 59% of Scientists Expect Significant Harm

https://heartland.org/opinion/97-consensus-on-climate-change-survey-shows-only-59-of-scientists-expect-significant-harm/

3. Putting the 'con' in consensus; Not only is there no 97 per cent consensus among climate scientists, but many also misunderstand core issues.

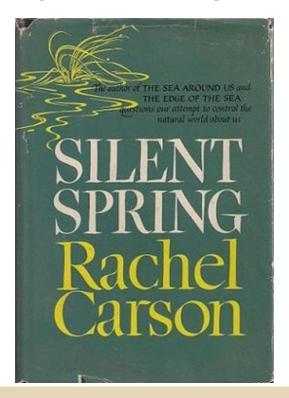

https://www.fraserinstitute.org/article/putting-the-con-in-consensus-not-only-is-there-no-97-per-cent-consensus-among-climate-scientists-many-misunderstand-core-issues

- Even the survey is not biased. Will you completely accept a hypothesis supported by 97% of the community?
- How about the hypothesis about the universe before Copernicus?
- ~100% people believed the old hypothesis. Is it true?
- Rotating the sun=> the center of the Milky Way
 Galaxy=> Big Bang=> further new hypotheses....

- 97% agreed with it, then it's true?
 No, it's a type of **propaganda**.
 NOT a scientific approach.
- Keep our independent critical thinking rather than accept those brainwashing mind control.

Do you know the book 'Silent Spring' by a biologist Rachel Carson?

The founding mother of environmental protection. Initiated the establishment of EPA.

'Science is a double-edged sword'. Almost all technologies have good things and bad things.

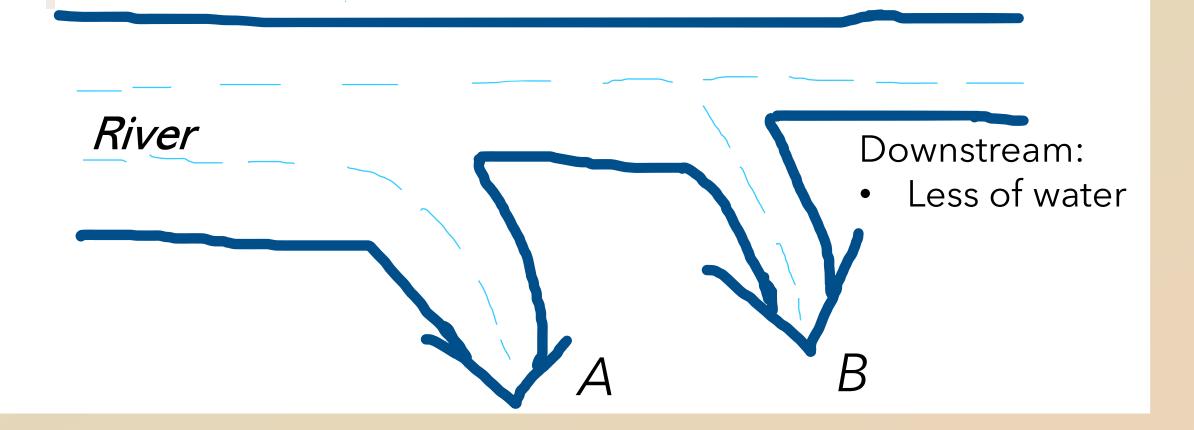

- Chemical materials
- Energy resources petroleum, coal, natural gas, hydropower, wind, solar, etc.

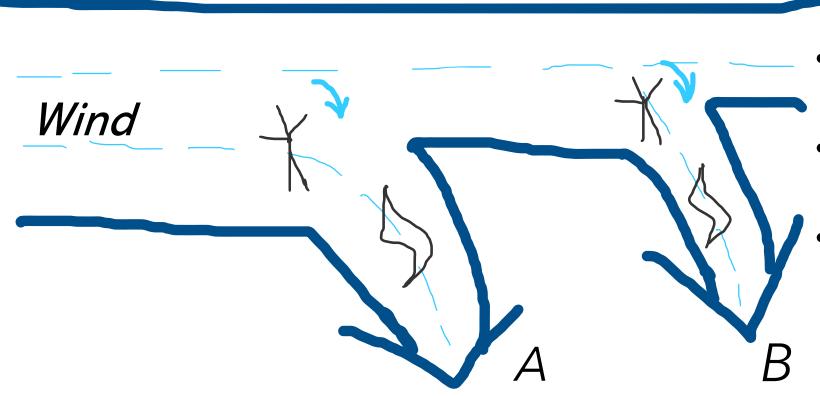

My statement-

Wind energy brings more climate change.

Why?

Downstream:

- Less of wind energy
- Less of delivery of heat
- Less of delivery of moisture
- It's CHANGING CLIMATE!

 Wind farm in Denmark creating fog (2008)

https://www.reddit.com/r/pics/comments/1pbeng/wind farm in denmark creating fog/?rdt=60301&onetap auto=true&one tap=true

• Impacts of accelerating deployment of offshore windfarms on near-surface climate(2022)

https://www.nature.com/articles/s41598-022-22868-9

Researcher showed impact of large-scale offshore wind farms on the sea surface climate.

- a significant reduction in the air-sea heat fluxes.
- cooling effect of the lower atmosphere going down.
- an increase in low-level clouds.
- surface winds decreased.
- an increase of 5% precipitation over the wind farm areas.

- I wish I would become another Rachel Carson.
- I wish all of us would become Rachel Carson.

Actions

• Spread my ideas to raise more public awareness about the correct attitude to

understand scientific theories (hypotheses) and implement new technologies.

Actions

 Try to change public policies to maintain a robust energy base for USA and the world.

Before the End

- > Those are all my personal opinions.
- > I do not represent any organization.
- > I am an independent researcher.

Who inspired me? JESUS CHRIST

• MATTHEW 5:14 'You are the light of the world. A city set on a hill cannot be hidden. Nor do people light a lamp and put it under a basket, but on a stand, and it gives light to all in the house.'

THANK YOU!

Bo (Larry) Lan, Ph.D.

Assistant Professor of Supply Chain Management

John Chambers College of Business and Economics West Virginia University
